Content

ViscosePolyester

Material

Viscose Viscose fibre is produced from cellulose pulp. Cellulose is dissolved in alkaline solution by a chemical reaction with carbondisulphide and then spun to fibres in an acid spinning bath. The fibres are washed, dried and cut to intended fibrelength. Polyester Polyester fibre is produced from terephtalic acid and ethyleneglycol, which react through condensation to polyester resin. The molten resin is spun to fibres through spinnerettes and cooled with air. Fibres are then cut to

intended fibrelength.

Production

This product is produced at Suameer mill, the Netherlands. Suameer mill is certified according to ISO 9002 (certification number: 19129) and registered according to EMAS (registration number: NL-S-0000025).

Destruction

This product is mainly used for industrial processes and hence it will be contaminated with different substances. Contact local authorities before destruction.
