Viscose Polyester Detergent

Material

Viscose Viscose fibre is produced from cellulose pulp. Cellulose is dissolved in alkaline solution by a chemical reaction with carbondisulphide and then spun to fibres in an acid spinning bath. The

fibres are washed, dried and cut to intended fibrelength. Polyester Polyester fibre is produced from terephthalic acid and ethyleneglycol, which react through condensation to polyester resin. The molten resin is spun to fibres through spinnerettes and cooled with air. Fibres are then cut to intended fibrelength. DetergentThe product contains a fragrance-free detergent, comprising: Ethylalcohol, non-ionic surfactant, amphoteric surfactant, odour neutraliser, preservatives, antifoaming agent and pH adjuster. The surfactants are fully biodegradable. The preservatives may be toxic to aquatic organism. Do not dispose in nature
