Content

Virgin pulp, fibres, Chemicals

Material

Virgin fibre Virgin pulp fibres are produced out of softwood or hardwood. The process is either sulphite or sulphate delignification, meaning that e.g. lignins and resins are removed from

cellulosic material.

Bleaching of fibres

Bleaching is a cleaning process of the fibres and the aim is to achieve a bright pulp, but also to get a certain purity of the fibre in order to achieve the demands for hygiene products and in some cases to meet the requirements for food safety. There are different methods used today for bleaching ECF (elementary chlorine free) where chlorine dioxide is used, and TCF (totally chlorine free) where ozone, oxygen and hydrogen peroxide is used.

Chemicals

The chemicals used in the process as well as the functional chemicals are assessed from an environmental, occupational health and safety and product safety point of view. The used functional chemicals are: Dry strength agent Dye Fixing agents Fluorescent whitening agent Glue Softeners The process chemicals are: Antipitch Protection agent Yankee coating Defoamer Dispersing agents and surfactants pH and charge control Retention aids Broke treatment chemicals Drainage aid

Product safety

The product fulfils the legislative requirements for food safety. Packaging Fulfilment of Packaging and Packaging Waste Directive (94/62/EC): Yes

Date of issue 2007-04-10

Revision date

Production

This product is produced at Ortmann mill, Austria, and certified according to ISO 9001:2000 and EMAS.

Destruction

Napkins are suitable in normal waste handling systems by the community. Used products should not be handled over to recycling systems.
